Scheduling & Reminders Made Simple

In-Office Scheduling

The **eClinicalWorks® Scheduler and Patient Registration System** streamlines healthcare practice management with a comprehensive scheduling tool for providers, resources, and patient appointments. The system **supports customizable schedules, centralized scheduling, appointment management, and effective handling of wait, ASAP, and bump lists**. Integrated features of appointment reminders allow for more efficient communication and help reduce no-shows[2].

Self-Scheduling & Appointment Reminders

HIPAA-compliant cloud-based self-scheduling empowers patients to schedule their appointments online while giving practices the control they need with customizable rules and filters. Vision centers can offer simple **online scheduling** through a scheduling widget **on their website or social media page** and spend less time on the phone.

Automated appointment reminders help reduce your no-shows and avoid the manual work of reminding patients about their appointments and instead, sending messages **via text, email, or voice**. Text messages can also include a secure link for patients to check in for their appointment through their mobile devices. During the online check-in process, patients can securely confirm insurance and demographic information, upload images of their driver's license, sign consent forms, and pay balances and copays[1].

No Shows? No Way!

A study conducted by eClinicalWorks[3] has shown that practices can increase their revenue up to $50,000[4] per year. **No-shows are dropping from 33% to 9% when a same day reminder is sent with the ability to check-in versus no reminder sent.**
